

Quarterly Operating Review

Fiscal Q3 — Manufacturing & Fulfilment

Prepared by the Operations Office

Distribution: Board of Directors, Executive Staff

Document reference: OPS-Q3-0042

Summary

Throughput recovered to plan after the Line 4 retrofit, with unit cost down 6.2% quarter on quarter. Fulfilment held a 98.1% on-time rate despite the October demand spike. Two risks remain open: supplier concentration in the drive-module category, and a widening gap in second-shift staffing.

This document is a sample used to illustrate Sheaf. Every page is real, selectable PDF text — redaction here removes the underlying bytes.

Key Figures

Metric	Value	QoQ
Units shipped	184,920	+4.1%
Unit cost (USD)	12.84	-6.2%
On-time fulfilment	98.1%	+0.7pt
Return rate	1.3%	-0.2pt
Second-shift fill	71%	-9pt

Notes

The Line 4 retrofit is fully commissioned. Remaining capital is earmarked for the second-shift expansion pending a final staffing review in Q4.

Outlook

We expect throughput to stay at plan into Q4 as the retrofit beds in. The principal lever is staffing: closing the second-shift gap would add an estimated nine points of effective capacity without further capital outlay.

Supplier concentration remains the key downside. A single vendor supplies sixty-two percent of drive modules; qualification of a second source is underway and should complete before the end of the fiscal year.

No change is recommended to the published full-year guidance at this time.
